

REMARKS

In view of the Examiner's determination that the instant invention was not wholly disclosed until the current application, applicant has canceled the "Reference to Related Applications". Hence, the requirement for a new declaration is moot, and it is no longer necessary to update this portion of the specification.

New main claim 19 is patentably distinguished over the applied art. U.S. Patent No. 5,828,052 to Reynolds does not disclose an annular resilient member surrounding the window 64. At best, the bumper 66 projects from the lower side of the window. Thus, Reynolds neither discloses upper nor side edges of an annular member.

Furthermore, claim 19 recites that an eyelet extends through a second resilient member. At best, Reynolds discloses a hole in an end cap 28. The resilient bumper 34' has no hole therethrough.

As for the secondary references, U.S. Design Patent No. D-293,795 discloses no resilient member at the end of the handle region, nor any eyelet through a resilient member. The same is true for U.S. Design Patent No. D-458,263 which likewise discloses no resilient member.

Allowance of claim 19 and its dependent claims is respectfully requested.

Wherefore, a favorable action is earnestly solicited.

Respectfully submitted,

KIRSCHSTEIN, OTTINGER, ISRAEL & SCHIFFMILLER, P.C.
